Subject: Change of Name and EPA ID number for PAN FOH0027

Due to a misunderstanding concerning two separate Preliminary Assessments that were written for the Marble Cliff Quarries Dump/Earth Co site, it was determined that the site name and EPA ID# associated with the WSTS #: OH0027 are incorrect. The old name and EPA ID# are:

OHD980510226

Marble Cliff Quarries Dump

This site name (Marble Cliff Quarries Dump) and EPA ID# (OHD980510226) will no longer be associated with the WSTS# OH0027. They will be associated with the new WSTS #: OH0843. This new WSTS # (OH0843) has been assigned to track the progress of Workplan and SI activities at a site immediately adjacent to the OH0027 site.

The EPA ID# and name that will be associated with the WSTS# OH0027 are :

OHD986970812

Earth Co

From this date (6/08/89) forward, all reference to Marble Cliff Quarries should be referred to the WSTS# OH0843 and PAN.

US EPA RECORDS CENTER REGION 5

456384

## Aquifer of Concern in the area of Marblecliff Quarries Dump

The geology in the area of Marblecliff Quarries Dump consists of limestone bedrock overlain by deposits of glacial till. The thickness of the till ranges from 50 ft to 110 ft. The till deposits consist of clay layers, sand and gravel.

The main aquifer in the area is the limestone bedrock. Fractures in the limestone store water and transmit appreciable quantities, allowing the construction of usable wells.

The limestone bedrock aquifer is confined by clays in some areas, while well logs and water levels indicate that in other areas a water table aquifer condition exists within the till and bedrock. The ~~confined~~ aquifer is therefore not a confined system throughout the three mile radius.
